Company profile and contribution to the COTEMACO project:

Passion for Safety

We can help you through our passion for safety and our commitment to continually develop our expertise in safety. We implement our expertise through coaching, training, and advisory services.

We focus on three areas of expertise:

- Machine safety,
- Process safety, and
- Safety culture and behavior

Machine Safety

An important theme within machine safety is CE-marking. Our expertise in this area has developed since the publishing of the European Guidelines (Machine, EMC, Low Voltage, ATEX 114 Directive and the Pressure Equipment Directive). The obligation to be compliant to CE-marking applies to new machines, however it is also applicable for existing machines that are modified or assembled. A special expertise within machine safety is Functional Safety. We have developed a V model for users, with which we guide you through the identification and classification from safety controls (SIL, PL) to the specification, verification and validation. For this expertise our TÜV certified Functional Safety Engineers are at your disposal.

Collaborative robot safety

We possess a lot of knowledge about robotics and collaborative robot safety and the integration of these machines in a production plant. There are several standards for robotics and collaborative robotics but they are not up to speed with the new technology. We can assist to make a risk assessment or a safe integration in the production plant or provide in a GAP analysis to check if robot supplier built it in compliance with the Machine Directive and standards.

Effective practical solutions & independent advise

Through the use of our expertise, you don't have to immerse yourself in the detailed guidelines, standards or theories. We do the hard work. You can concentrate on your core activities because you know with D&F you have the latest state of the art technology in house for technical safety and safety culture. Our consultants have extensive knowledge and experience in the industry where effective practical solution orientated advise can be offered. With D&F you have an independent advisor in house. As we have all the relevant expertise under the same roof, we achieve synergy and prevent conflicting advice. For every project

we create a customized proposal and together we look at which form of collaboration fits best for you.

Training

If you want to have in-house expertise yourself, you will find extensive training courses in our Safety Academy around machine safety, robot safety and Functional Safety, from basic to very extensive.
