Company profile and contribution to the COTEMACO project:

YASKAWA is one of the largest manufacturers of industrial robots, with 400,000 robots installed worldwide. In addition to application-based variants such as packaging, palletizing and handling robots, the broad range of robots includes robots designed for laboratory and clean room applications as well as top quality, turnkey automated systems. For the Cotemaco project can commit to making an HC10 collaborative robot available for a joint demonstrator. Furthermore, engineering support can be offered for simulations and programming, also training services can be offered.
