Company profile and contribution to the COTEMACO project:

Probotics provides standard and custom designed autonomous vehicles for indoor and outdoor logistics. Our AGV's need no infrastructure to navigate, are able to carry pallets and bins from 50 kg to 2500 kg and lift them to 4.5 meter.

We can share in the projects knowledge about feasibility of AGV's in food related applications with special interest in AGV's usable in food processing. Aspects like cleaning, use on wet floors and human safety need special measures.

We further can share knowledge and organize workshops around deploying and integrating AGV's in food processing applications.
