Head of International Sales

Raith develops leading edge lithography systems enabling semiconductor customers to drive innovation and production. Our maskless electron beam, laser beam and focus ion beam patterning solutions cover the full range, from μm structures to sub 10 nm critical device fabrication.

The Raith product portfolio is being complemented by automated SEM based chip analysis and process control systems.

Our worldwide service and customer support structures are backed by experienced experts in our international applications and development centers.

We are fully committed to further push the limits of nanofabrication in close collaboration with our outstanding customer base.
