Our solutions are delivered via a unique combination of innovative test technology and realization including instruments, applications expertise and supply chain & test services.

ATE Instrument Solutions: We design and manufacture high quality instruments that are used by our customers to upgrade the performance or channel density of their automatic test equipment (ATE) and/or Test & Measurement setups. These instruments provide a cost effective means for our customers to extend the throughput and useful life of their ATE investments.

Test Application Development: We provide a wide range of engineering services including test program development and conversions, test program optimization, load board development and failure analysis. We are specialized in mixed signal, RF and High Speed test techniques.

Supply Chain & Test Services: We have in-house test and analysis equipment to offer packaged and wafer chip testing from sample & process qualification up to mid-size volume production test in Europe. We also provide supply chain services from prototyping, manufacturing up to repair service for advanced measurement solutions.
